Another successful National Forum on Maintenance -7th year of the international conference, took place. We dare to say that the conference has already firmly established itself among the events of its kind. The following facts prove this statement.

The dates (this year in the last week of the month – 29 – 30 May, 2007) and place (hotel Patria in the High Tatras at Štrbské Pleso) are being automatically associated with the National Forum on Maintenance conference. The conference was attended by 191 participants, of which 36 from foreign countries, which is a new record that overcame up till now the most successful regional conference Central European Forum on Maintenance held in 2005. This year there was absolutely highest number of participants from Slovakia yet there were a good number of visitors from abroad, especially from the Czech Republic. We missed representatives of EFNMS, but we had one special guest from the South America, Mr. Athayde Ribeiro, executive director of Brazilian Maintenance Society ABRAMAN.

The conference programme was composed of presentations starting with general and main conference partners, followed by professional lectures and partners' presentations in accordance with the topic areas. Conference topics followed a traditional scheme – the first day maintenance management and best practices, followed by maintenance information systems. The second day there were maintenance technologies and diagnostics methods, in the final special topics (safety, education, etc.).
